

GEOS SUSTAINABLE SURFACE

COMMERCIAL CARE AND MAINTENANCE

CARE AND MAINTENANCE

GĒOS Sustainable Surfaces are easy to maintain and keep clean. For daily care and maintenance we recommend wiping the surface with a damp cloth or a mild cleaner such as 409®, Fantastik®, or comparable cleaning product. The use of bleach or other harsh chemical cleaners is not necessary and is not recommended.

GĒOS Sustainable Surfaces are non-porous so there is no need to seal or wax the surface. We do recommend, however, that spills be wiped up as soon as possible just as a matter of practice. In the event of a stubborn stain, we suggest soaking the stain with a mild cleaner combined with gentle scrubbing with a nonabrasive pad such as Scotch Brite®.

GĒOS Sustainable Surfaces are heat and scratch resistant. However, to avoid thermal shock, the use of a hot pad and trivet are recommended instead of placing hot items directly on your GĒOS Sustainable Surface. This practice is also suggested when using crock pots or electric skillets. When cutting with sharp objects we recommend the use of a cutting board.

THE GĒOS DIFFERENCE

Over the last decade, more and more companies strive to protect the environment in which we live. GĒOS Sustainable Surfaces is the first recycled glass surface to combine an environmental focus with a product that is durable, easy to maintain and aesthetically pleasing.

The majority of recycled glass surfaces are made using concrete, making them porous. Over time, what was once a beautiful investment will be full of etches and stains if not properly maintained by sealing and waxing at least once every year. GĒOS Sustainable Surfaces are non-porous and practically maintenance free, never requiring the need to be sealed or waxed. Backed by a 10 year warranty, GĒOS Sustainable Surfaces is a choice you can live with.
